## Projects

### Cravify – Event-Driven Food Delivery Platform | React, Node.js, Express, MongoDB, Socket.io, JWT

- Developed a production-grade multi-role food delivery platform inspired by Swiggy/Zomato, supporting Customers, Vendors, Riders, and Admins with scalable **RESTful APIs**, real-time order lifecycle management, and centralized role-based access control. Implemented live delivery tracking using **Socket.io** and optimized route calculation using **OSRM** with in-memory caching for faster rider navigation.
- Built secure authentication and platform security using **JWT** and **bcrypt.js**, with MongoDB and Mongoose for scalable data modeling and persistence. Integrated Razorpay payment gateway for secure online transactions and implemented Google OAuth-based social login for seamless user authentication. Added **ImageKit**-powered vendor/rider document verification, dynamic menu and cart management, and real-time order notifications within an event-driven backend architecture.

### TaskHive – SaaS Task Management Platform | React, Node.js, Express, MongoDB, JWT

- Designed and developed a scalable SaaS task management backend using **Node.js** and **Express.js**, enabling teams to create projects, assign tasks, and track workflow through structured **RESTful APIs**. Implemented workspace-based collaboration, task assignment and role-based access control for efficient multi-user project management.
- Built secure authentication and authorization using **JWT** and **bcrypt.js**, ensuring protected API routes and encrypted password storage. Integrated MongoDB with Mongoose for efficient data modeling, persistence, and scalable backend architecture for users, projects, and task management services.

### SocialChat – Real-Time Messaging Platform | Node.js, Express, MongoDB, Socket.IO, JWT

- Designed and developed a scalable real-time chat backend using **Express.js** and **Socket.IO**, enabling instant bi-directional communication between users through persistent WebSocket connections. Implemented user-to-socket mapping for targeted message delivery and online presence tracking.
- Built secure authentication and authorization using **JWT** and **bcrypt.js**, ensuring protected API routes and encrypted password storage. Integrated MongoDB (Mongoose) for efficient message persistence and user data management, with structured RESTful APIs for chat, user, and authentication services.

## Technical Skills

**Languages:** C, C++, JavaScript, SQL

**Frameworks:** React.js, Node.js, Socket.io, MySQL

**Developer Tools:** Git, VS Code, Linux shell

**Databases:** MySQL, MongoDB

**Soft Skills:** Team Collaboration, Problem Solving, Communication, Time Management

**Coursework:** Data Structures and Algorithms, Operating Systems, DBMS, Computer Networks

**Areas of Interest:** Full Stack Development, Competitive Programming

## Achievements

---

- Leetcode     <https://leetcode.com/u/Ayushsoni/>
- Codolio     <https://codolio.com/profile/ayushsoni>

## Certificates

---

- javascript bootcamp     <https://verify.letsupgrade.in/certificate/LUEJSJUL125643>
- c Programming     <https://www.guvi.in/verify-certificate?id=E2X9791H1wT1I10432>
- SQL bootcamp     <https://verify.letsupgrade.in/certificate/LUESQLJUN125623>
